Author Index

Ahrstrom	B O	Modified split Hopkinson pressure bar method for determination of the dilatation-pressure relationship of lubricants used in elastohydrodynamic lubrication	63–73
Aung	A	Application of analysis of variance to wet clutch engagement	117–125
Bair	S	The shear rheology of thin compressed liquid films	1–17
Bair	S	The high pressure rheology of some simple model hydrocarbons-	139–149
Bhushan	B	Effect of operating environment on failure mechanism of a head-tape interference in a linear tape drive with a belt-driven cartridge	159–176
Biswas	S K	Wear of metals: a consequence of stable/unstable material response	357–370
Bonneau	D	Dynamic behaviour of elastic engine main bearings: theory and measurements	179–193
Bonneau	D	Comparison between experimental film thicknessmeasurements and elastohydrodynamic analysis in a connecting-rod bearing	195–208
Briscoe	B J	Wear of polymers	401–414
Calvert	C	Design and development of an elastomer-based pneumatic seal using finite element analysis	127–138
Chomat-Delalex	A M	Dynamic behaviour of elastic engine main bearings: theory and measurements	179–193
Cropper	A B	The efficiency and friction of plastic cylindrical gears Part 1: Influence of materials	75–92
Cropper	A B	The efficiency and friction of plastic cylindrical gears Part 2: influence of tooth geometry	93–103
Dani	A D	Prediction of linear wear by extending the Kragelskii model for wear of roughness peaks in sparse contact	327–342
Dong	D	Elastohydrodynamic properties and boundary lubrication performance of polyester in a hydrofluoroether refrigerant environment	19–26
Erdemir	A	Friction and wear of diamond and diamond-like carbon films	387–400
Frene	J	Dynamic behaviour of elastic engine main bearings: theory and measurements	179–193
Frene	J	Comparison between experimental film thicknessmeasurements and elastohydrodynamic analysis in a connecting-rod bearing	195–208
Friedrich	K	Wear of polymer composites	415–426
Gandjalikhan Nassab	S A	Three-dimensional thermohydrodynamic analysis of axially grooved journal bearings	35–47
Gellman	A J	Surface chemistry in tribology	443–462
Glavatskih	S B	Laboratory research facility for testing hydrodynamic thrust bearings	105–115
Goldale	A V	Effect of operating environment on failure mechanism of a head-tape interference in a linear tape drive with a belt-driven cartridge	159–176
Gui	C-L	A study of a journal bearing lubricated by couple stress fluids considering thermal and cavitation effects	293–305
Guo	F	A multi-beam intensity-based approach for lubricant film measurements in non-conformal contacts	281–291
Hatakenake	K	Thermohydrodynamic performance of journal bearings with partial reverse flow and finger-type cavitation	315–325
Holgerson	M H	Application of analysis of variance to wet clutch engagement	117–125
Hsu	S M	Wear in boundary lubrication	427–442
Hutchins	I M	Abrasion processes in wear and manufacturing	55–62
Jahanmir	S	Wear transitions and tribochemical reactions in ceramics	371–386
Kato	K	Classification of wear mechanisms/models	349–356
Kauder	K	Newtonian or shear-thinning oils for screw-type compressors?	307–314
Kawahara	S	Study on the cavitation mechanism in hydraulic oil flow using a needle projection	27–34
Khonsari	M M	Application of analysis of variance to wet clutch engagement	117–125
Kishitani	M	Study on the cavitation mechanism in hydraulic oil flow using a needle projection	27–34
Klein Meuleman	P	The efficiency and friction of plastic cylindrical gears Part 1: Influence of materials	75–92
Klein Meuleman	P	The efficiency and friction of plastic cylindrical gears Part 2: influence of tooth geometry	93–103
Laksminarayanan	P A	Prediction of linear wear by extending the Kragelskii model for wear of roughness peaks in sparse contact	327–342
Majumdar	B C	Study of externally-pressurized gas-lubricated two-layered porous journal bearings: a steady state analysis	151–158
Mansouri	M	Application of analysis of variance to wet clutch engagement	117–125
Martin	J K	Extended expansion of the Reynolds equation	49–51
Maspeyrot	P	Dynamic behaviour of elastic engine main bearings: theory and measurements	179–193
Maspeyrot	P	Comparison between experimental film thicknessmeasurements and elastohydrodynamic analysis in a connecting-rod bearing	195–208
Medina	S	An analysis of misaligned spline couplings	269–279
Moayeri	M S	Three-dimensional thermohydrodynamic analysis of axially grooved journal bearings	35–47
Moreau	H	Dynamic behaviour of elastic engine main bearings: theory and measurements	179–193
Moreau	H	Comparison between experimental film thicknessmeasurements and elastohydrodynamic analysis in a connecting-rod bearing	195–208
Munro	R	Wear in boundary lubrication	427–442
Muraki	M	Elastohydrodynamic properties and boundary lubrication performance of polyester in a hydrofluoroether refrigerant environment	19–26
Nayak	N	Prediction of linear wear by extending the Kragelskii model for wear of roughness peaks in sparse contact	327–342
Olver	A V	Gear Lubrication – a review	255–267
